

A company of the MMS -
Metrology & Monitoring Solutions
group

Expert in measurement monitoring solutions meeting the Quality

JRI has been created in 1845. The company is one of the main manufacturers of wireless temperature monitoring solutions, but also of humidity, CO₂ and other parameters specific to the Laboratory in Healthcare and environment sectors.

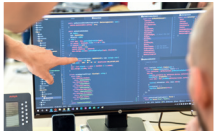

Our core business: the design and manufacture of wireless sensors and software platform offering an integrated measurement traceability solution

We propose innovative, connected solutions that fit in a well-known quality approach (COFRAC accredited, NIST affiliated, compliance to FDA 21 CFR part 11, GAMP5, EU Annex 11, WHO, GxP...) to assure the monitoring of sensitive products and environment.

Conception and design of both Hard- and Software for the measurement traceability

An in-house R&D department with a wide range of skills and expertise in electronics, IT and mechanics.

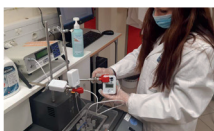

Production and installation of our monitoring systems

JRI has a French based production site with internationally deployed sales and technical teams.

Metrology services in our laboratory or on-site: calibration & mapping

In-house COFRAC accredited (Accreditation n°2-1943 and 1-2471) laboratory and 2 mobile extensions.

PRODUCTS & SERVICES

- o Connected sensors, extremely precise for the monitoring of both stationary cabinets and mobile units
- o Intuitive and flexible Cloud & Server software solutions to manage the measures
- o Intuitive and flexible Cloud & Server software solutions to manage the measures (IQOQ)
- o Training and Maintenaing in operational condition

Key dates

Launching of the SPY RF range: the first bi-directional radio-frequency sensors in server mode

2007

As a pioneer JRI launches SiriusWeb, the cloud-based temperature monitoring solution

2010

Global Innovation: Lab'express is the mobile extension of our Cofrac metrology lab

2015

Launching of the JRI MySirius solution and a new generation of connected sensors

2018

Naocom acquisition and integration of a "transport" solutions offer

2020

Labguard® solutions integration and maintaining in an operational condition

2021

A performing international presence

The JRI's world coverage is based on a wide global network of qualified international distributors with whom we maintain a longstanding partnership is maintained between us. Our Export Department, composed of French based and foreign offices, drives the partners network and their projects.

Our financial and structural strength gives us the necessary means to assure the durability of the existing Labguard® installations. We will answer the customer's expectations regarding support, maintenance, associated services and hardware and software evolutions.

+ 15 years of international experience

+ 200 000 deployed wireless sensors

+ 10 000 monitored sites

What JRI will offer to the Labguard® solutions user: the continuity of your process and the durability of your system

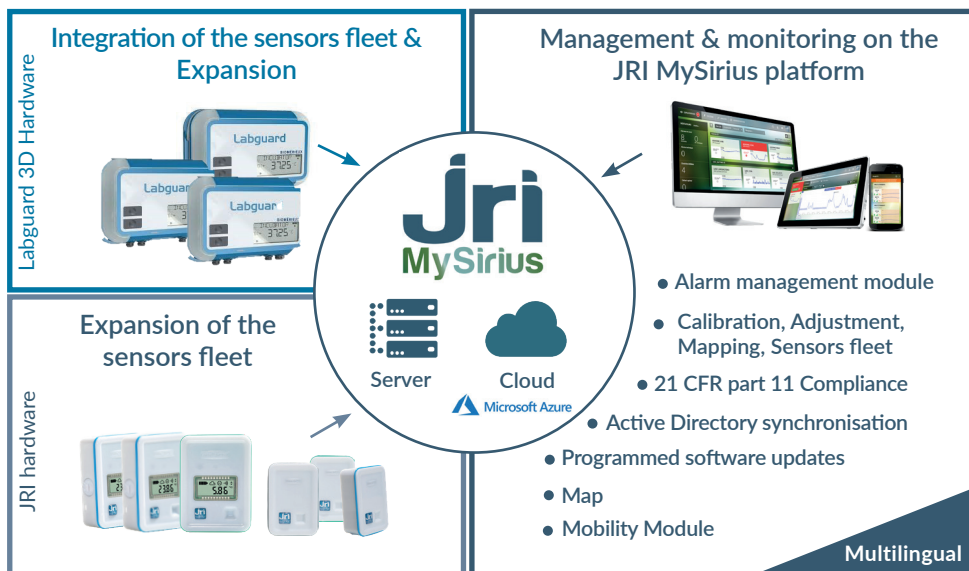

Just a new spokesperson to be able to continue to use your Labguard® solution with its associated services and to benefit from the hardware and software solutions of the JRI MySirius solution.

Both technical teams are linked by a long-standing faithful relationship, that has been reinforced when collaborating to follow up the existing Labguard® installations.

Without interrupting your existing procedures, we assure the continuity of the Labguard® 3D supply, and their maintenance in operational condition.

The JRI MySirius solution opens interesting perspectives for evolution of the Labguard® range:

- Combine their existing sensors with new technology sensors when extending their sensor fleet
- Answer new use cases
- Deploy solutions in a secured multi-site SaaS or Cloud mode...

The integration of the Labguard® range in the JRI MySirius solution is scheduled for the first quarter 2021.

A specific organization has been set up to help you move forward and to answer all your questions.
