

Time Temperature Integrator

Cold chain monitoring for thermo-sensitive products during transport

Non-contractual photo

Presentation

The Time Temperature Integrator records the cumulative time, up to 8 hours, during which your product was exposed **above predetermined critical temperatures**. An adhesive label, it allows a direct application on the product or packaging.

Completely inert until activation, the Time Temperature Integrator is easy to start by pressing the activation button. This activation by the initial push of the button is indicated by a color change of the button from clear to colored circles. As long as the product being monitored is kept below the critical temperature, there is no colored indication in the time temperature integrator window.

If the predetermined critical temperature is reached, a cumulative time at and above this temperature is recorded by an irreversible color change allowing for rapid and reliable on-site quality decisions without the use of software or other equipment.

Benefits

- Accurate and irreversible
- Easy to read and clear color indicator
- Rapid decision making
- Economic
- Applicable for both storage and transport
- Available at 3 different predetermined temperature settings*:
+8°C, +10°C and +25°C
- Does not contain toxic reagents

Technical features

Temperature	Available in +8°C, +10°C and +25°C*
Measurement accuracy	+/- 1°C
Reading	Direct by color migration
Lifetime	2 years
Start	Manual activation
Installation instructions	Adhesive system
Storage conditions	Ambient temperature
Dimensions	40 x 19 mm
Packaging	100 pieces
Delivered with	Compliance certificate

*Other temperatures in the range from -14°C to +30°C on request
